TIP

You can always change your enabled features later from [Home → Tools → Feature Management](#).
Changes take effect after the app restarts.

Available Features

Select only what your business uses — each enabled feature adds a tab to the ribbon interface.

Point of Sale

Cashier checkout, product search, cart management, receipts, and customer accounts.

Product Management

Product catalog, variants, categories, brands, discounts, and barcode printing.

Stock Management

Track inventory levels, run stock audits, manage purchase orders and GRNs.

Bill Management

Supplier bills, loans, rentals, properties, and expense tracking.

Human Resources

Employee records, departments, salary, payroll, and attendance.

Restaurant

Table management, menu items, orders, KDS, ingredients, and restaurant POS. Cannot be combined with Point of Sale.

Services

Service-bound products and job management for service businesses.

Social Campaigns

Design studio for creating branded social media content and ad creatives.

Signing In to an Existing Account

The Zeebroo POS login screen — enter your registered email and password to continue.

1 Enter your email and password

On the login screen, type your registered email and password.

2 Click Sign In

The app will authenticate with the server and load your business data. The main interface opens automatically.

3 Set up a bank account (first time only)

If you haven't added a bank account yet, the Bank Account Setup Wizard will open. Add at least one account so payments can be settled correctly.

1

Add Bank Account

Choose your bank from the list or enter a custom name. Select the account type (Current, Savings, Cash, etc.) and assign a currency.

2

Account Details

Enter the *Account number* and any additional reference details. These are used for reconciliation and reporting only.

Bank information
Add your banking details for record keeping and reconciliation.

ACCOUNT TYPE *

3

Opening Balance

Enter the current balance of this account. This sets the starting point for all financial tracking. Click **Save** to complete the setup.

The screenshot shows the Zeebroo POS interface for 'Poorni Flowers'. A modal window titled 'Opening balance' is displayed in the center. The modal has a progress bar at the top with three steps: 'ACCOUNT' (checked), 'BANK' (checked), and 'BALANCE' (active, indicated by a blue circle with the number 3). Below the progress bar is a green icon of a stack of coins. The title 'Opening balance' is followed by the text: 'What is the current balance in this account? You can update this later.' Below this is a section labeled 'CURRENT BALANCE' with a red asterisk. A text input field contains the value '0.00400000'. Below the input field is a section labeled 'NOTES (optional)' with a text area containing the placeholder text 'Any notes about this account...'. At the bottom of the modal are three buttons: 'Skip for now', 'Back', and 'Create Account' (which is highlighted in dark blue). The background interface shows a navigation menu with options like 'File', 'Home', 'POS', 'Sales', 'Inventory', 'View', 'Orders', 'Customers', 'Suppliers', 'Settings', and 'Help'. There is also a 'Quick Actions' section with buttons for 'New Sale', 'Add Product', 'New Bill', 'Purchase Orders', and 'Print Barcodes'. The top right corner shows the user's profile 'Poorni Flowers Administrator'.

Switching Businesses or Branches

If your account is linked to multiple businesses or branches, click your profile name in the top-right corner to open the account panel. Use **Switch Business** or **Switch Branch** to change context. All data refreshes automatically.

Home Dashboard

Your command centre — daily KPIs, sales trends, quick actions, and real-time activity feed.

The Ribbon Interface

Zeebroo POS uses a Microsoft Office–style ribbon at the top of the screen. It's organised into **tabs** (Home, POS, Sales, Inventory, etc.) and **groups** within each tab. Click a tab to switch context — the ribbon buttons and the main panel both update together.

TIP

Only the tabs for your enabled features are visible. If you don't see the Restaurant or HR tab, go to **Home → Tools → Feature Management** and enable the relevant feature.

Dashboard KPIs

The Home dashboard shows live key performance indicators at the top:

- **Today's Sales** — total revenue for today

- **Transactions** — number of completed sales today
- **Products** — total products in your catalog
- **Customers** — total registered customers
- **Cash Flow** — net cash movement (income minus expenses)
- **Expenses** — outgoing costs for the current period

KPIs refresh every time you open the Home tab or click **Refresh** in the Overview group.

| Sales Analytics Chart

Below the KPIs is a bar chart showing daily sales over the past 14 days. Hover over any bar to see the exact amount for that day. Use this to spot weekly patterns and peak trading days.

| Quick Actions

The ribbon's **Quick Actions** group gives one-click access to the most common tasks:

BUTTON	WHAT IT DOES
New Sale	Opens the POS tab ready to start a sale
New Product	Opens the Add Product form in Inventory
New Bill	Opens the Create Bill form in Finance
New Employee	Opens the Add Employee form in HR

| Real-time Activity Feed

The right panel of the Home dashboard shows a live feed of recent events — new sales, stock adjustments, new customers, and system actions — updated automatically every 30 seconds alongside the background sync engine.

| Keyboard Shortcuts

All shortcuts work on Windows and macOS. On macOS substitute **Ctrl** with **⌘ Cmd** where shown.

NAVIGATION	
Open POS tab	F2
Toggle full screen	F11

Ctrl

0

Point of Sale

Process sales quickly, manage your cart, handle multiple sessions, and check out customers with cash, card, or bank transfer.

The POS Layout

The POS screen has three zones:

- **Left — Product grid:** All your products displayed as cards, filterable by category
- **Right — Cart:** Items added to the current sale, with totals and payment controls
- **Top — Search & category bar:** Filter products by name, SKU, or barcode, and jump between categories

Starting a Sale

1

Open the POS tab

Click the **POS** ribbon tab, or press **F2** from anywhere in the app.

2

Find a product

Click a product card directly, or type in the search bar to filter by name, SKU, or scan a barcode with **F3**. Click the

Recent

chip to show your most frequently sold items first.

3

Add to cart

Click any product card to add one unit. Click it again to increase quantity, or edit the quantity number directly in the cart. Remove a line by clicking the X icon.

4

Apply a discount (optional)

If the Discount field is enabled in Settings, a discount box appears in the cart footer. Enter a percentage or fixed amount. This applies to the whole sale.

5

Process payment

Click **Checkout**. Select the payment method —

Cash

,

Card

, or

Bank Transfer

. For cash, enter the amount tendered and the change is calculated automatically. Click

Confirm Sale.

6

Print or share receipt

After confirming, the receipt preview opens. Print directly or close to return to the POS.

Multiple POS Sessions (Tabs)

You can run several parallel sales at once — useful for holding an order while serving another customer. Each session is called a **tab**.

- Click **+ New Tab** in the POS session bar to open an additional register
- Click any tab to switch between active sessions
- Each tab holds an independent cart — switching tabs does not affect the other session's items

| Parking an Order

If a customer needs to come back, click **Park Order** (in the POS ribbon group) to save the current cart without completing the sale. The parked order count badge appears in the ribbon. Click **Parked Orders** to retrieve and continue any parked sale.

| Customers

Attach a customer to a sale for purchase history tracking and account management.

1 Search or create a customer

Click **Customer** in the cart header. Type a name or phone number to search existing customers, or click **New Customer** to add one on the spot.

2 Link to the sale

Select the customer from the dropdown. Their name appears in the cart and the sale is recorded in their purchase history.

Access the full customer list from the ribbon's **Customers** group to view purchase history, outstanding credits, and account balances.

| Quotations

Create a quotation (price estimate) without completing a sale:

1 Build the cart as normal

Add the products and quantities the customer is interested in.

2 Click Quotation in the ribbon

Under the **Quotations** ribbon group, click **New Quotation**. The current cart items are saved as a quotation with a quote number.

3 Print or convert

Open the quotation from the Sales tab to print it or convert it to a completed sale.

| POS Keyboard Shortcuts

Master these shortcuts to speed up every transaction. On macOS, replace  with .

OPENING & NAVIGATION	
Open POS / focus product search	F2
Toggle full screen mode	F11
Close modal / cancel action	Esc
Move between input fields	Tab
FINDING PRODUCTS	
Focus the product search bar	F2
Start typing anywhere to search	Any key

Open a new POS session tab	F7
Switch to next session tab	Ctrl Tab

Switch to previous session tab	Ctrl Shift Tab
Park the current order	Ctrl K
Open parked orders list	F6
CHECKOUT & PAYMENT	
Open checkout / payment screen	F10
Select Cash payment method	F10 then 1
Select Card payment method	F10 then 2
Select Bank Transfer method	F10 then 3
Confirm / complete the sale	Enter
Print receipt after sale	Ctrl P
Reprint last receipt	F12

CASHIER TIP

The fastest checkout flow is: scan items with a barcode scanner (F3), check the cart total, press F10 to open payment, type the cash amount tendered, press Enter to confirm, then Ctrl+P to print — never touching the mouse.

IMPORTANT

The POS and Restaurant POS features are mutually exclusive. If your business uses the Restaurant module, use the **RESTAURANT POS** tab instead — see Chapter 10.

View your transaction history, handle customer returns, run end-of-day settlement, and manage sales invoices.

Click any transaction row to open its full detail — items sold, payment method, amounts, and receipt reprint options.

Click **Sales History** in the Transactions group to open the analytics view. Here you can:

- Filter by date range to see any period's performance
- See top-selling products in the period
- View a daily bar chart of revenue

- See total sales, total transactions, and average order value

Sales analytics — daily revenue bar chart with period totals, transaction count, and top products.

Processing a Return

1 Open the Returns group

In the **SALES** ribbon, click **New Return**.

2 Find the original sale

Search by sale number or customer. Select the sale you're returning items from.

3 Select items and quantities

Check the items being returned and enter the quantity. The refund amount calculates automatically.

4 Select a return reason and confirm

Choose a reason from the list (Defective, Wrong item, Customer changed mind, etc.) and click **Process Return**. Stock is automatically restocked.

End-of-Day Settlement

At the end of each trading day, run a settlement to reconcile cash and clear the session. This is found in the **Settlement** ribbon group.

1

Click End-of-Day

The system tallies all transactions since the last settlement — cash sales, card payments, and bank transfers separately.

2

Count your cash drawer

Enter the physical cash amount in the drawer. The system shows the expected amount and any variance.

3

Confirm and print

Click **Confirm Settlement**. A settlement report is generated and the session resets for the next day.

Sales Invoices

Create and send formal invoices to business customers from **Transactions → Invoices**. Each invoice can include payment terms, due dates, and line-item descriptions. Invoices can be printed or exported as PDF.

Inventory & Products

Build your product catalog, track stock, manage suppliers and purchase orders, and print barcodes.

Adding a Product

1

Open Inventory

Click the **INVENTORY** tab, then click **New Product** in the Catalog ribbon group.

2

Fill in the Overview tab

Enter the *Product name*, *Category*, *Brand*, *SKU*, and *Barcode*. Mark it active to make it visible in the POS.

3

Set pricing

Go to the

Pricing

tab. Enter the *Cost price* and *Selling price*. You can optionally add tiered selling units (e.g. sell individually and by the dozen at different prices).

4

Set initial stock

Go to the

Stock

tab. Enter the *Opening stock quantity* and *Low stock alert level*. The app will warn you when stock falls below this threshold.

5

Add images

Go to the

Images

tab. Click *Choose Image* to open the image picker — you can upload from your computer, choose from the File Manager, or generate an AI image.

6

Add variants (optional)

Go to the

Variants

tab to create size/colour/style variations of the same product, each with its own SKU and price.

7

Save

Click *Save Product*. The product immediately appears in the POS grid.

| Categories & Brands

Organise your catalog with categories and brands. In the Inventory ribbon's **Catalog** group:

- Click *Categories* to add, rename, or reorder product categories
- Click *Brands* to manage your product brands — useful for filtering in both POS and inventory views
- Click *Discounts* to create reusable discount rules that can be applied at checkout

| Stock Management

Track your inventory levels and make adjustments from the **Stock** ribbon group.

ACTION	WHEN TO USE
Stock Audit	Count physical stock and correct discrepancies. Creates a permanent audit record.
Stock Adjustment	Add or remove stock manually — for wastage, loss, or corrections.
Stock Transfer	Move stock between branches of the same business.

TIP

Every sale automatically deducts from stock. Every purchase order receipt automatically adds to stock. Manual adjustments create an audit trail with timestamps and user attribution.

Suppliers

Maintain a supplier directory in the **Suppliers** ribbon group. For each supplier, store their name, contact details, address, and default payment terms. Suppliers are then linked to purchase orders.

Purchase Orders

Manage your purchasing workflow from **Inventory → Purchasing → Purchase Orders**.

1

Create a Draft PO

Click **New PO**. Select a supplier, set the order date and expected delivery date, then add line items — each with product, quantity, and unit cost.

2

Place the order

Once the PO is ready, click **Place Order**. The status changes to

Ordered

. The PO is now locked from further editing.

3

Receive goods (GRN)

When goods arrive, open the PO and click **Receive Goods**. Enter the quantities actually received. A Goods Receipt Note (GRN) is created and stock levels are updated immediately.

Barcode Printing

Select one or more products in the inventory list, then click **Print Barcodes** in the **Print** ribbon group. Choose your label sheet size, set the quantity per product, and print directly to any connected label printer.

Finance & Accounts

Monitor cash flow, manage bills and expenses, track loans, handle rental income, and maintain your financial accounts.

Financial Overview — Cash Flow

Click the **FINANCE** tab to open the finance panel. The default view is **Cash Flow**, showing:

- Monthly income vs. expenses chart
- Running account balances
- Recent income and expense transactions
- Net cash position for the current period

Use the date range selector to zoom into any period or compare months.

Bank Accounts

All payments flow through accounts. Go to the Finance panel and click **Accounts** in the sub-navigation. Here you can:

- Add bank accounts, cash tills, and mobile money wallets
- View the full transaction ledger for each account
- Transfer money between accounts
- Reconcile account balances with your bank statement

NOTE

- ✓ You must add at least one bank account before you can process sales. The Bank Account Setup Wizard runs automatically on first login.

Bill Management

Record supplier invoices and bills you need to pay. In the Finance ribbon, click **New Bill**.

1

Enter bill details

Select the supplier, enter the invoice number, date, and due date. Add line items for each expense category.

2

Record payment

When you pay the bill, open it and click **Record Payment**. Select the account the payment was made from and the amount paid.

3

Track partial payments

You can make multiple partial payments against one bill. The outstanding balance updates after each payment until the bill is fully settled.

Loans

Track business loans — both money borrowed and money lent. From the Finance panel sub-navigation, click **Loans**. Record the principal amount, interest rate, and repayment schedule. The system tracks each repayment and shows the remaining balance.

Rentals & Properties

If your business manages rental properties or pays rent, the **Rentals** and **Properties** views let you track lease terms, monthly payments, and property-related expenses. Each property links to a billing schedule that reminds you of upcoming payments.

| Finance Reports

Access standard financial reports from the **Reports** ribbon group:

- **Profit & Loss** — income vs. expenses for any period
- **Account Statement** — full ledger for a specific account
- **Expense Summary** — breakdown of spending by category

Human Resources

Manage your team — employee records, departments, salary structures, payroll runs, and attendance tracking.

HR tab — employee management, departments, payroll cycles, and salary sheets.

REQUIREMENT

The **HR** tab only appears when the

HUMAN RESOURCES

feature is enabled. Go to Home → Feature Management if you don't see it.

Adding Employees

1

Click New Employee

In the **HR** ribbon, click **New Employee** in the People group.

2

Overview tab — Basic information

Enter the employee's name, job title, email, phone, and start date. Assign them to a department and set their employment type (Full-time, Part-time, or Contract).

3

Personal tab — Identity details

Add the national ID number, date of birth, address, and emergency contact information.

4

Save the record

Click **Save Employee**. The employee now appears in your team roster and can be included in payroll runs.

Departments

Click **Departments** in the HR ribbon to create and manage departments. Each department can have:

- A department head employee
- A list of assigned employees
- A salary sheet tab showing all members' compensation

Salary & Payroll

From the **Compensation** ribbon group, manage salaries and run payroll:

1

Set salary for each employee

Open an employee record and go to the salary section. Enter their base salary and any allowances.

2

Run payroll

Click **Payroll Run**. Select the pay period (monthly, bi-weekly), choose the employees to include, and confirm the amounts. The payroll is recorded as an expense against the business account you select.

3

Print payslips

After confirming, generate and print individual payslips for each employee from the payroll run summary screen.

Attendance

Track attendance directly in the app. Open an employee record and use the attendance log to record daily check-in and check-out times, late arrivals, absences, and leave. Attendance data feeds into payroll calculations automatically when configured.

Design Studio

Create branded social media content, marketing banners, and promotional graphics directly inside the app.

REQUIREMENT

The **DESIGN** tab only appears when the **SOCIAL CAMPAIGNS** feature is enabled.

Creating a Campaign

1

Open the Design tab

Click **DESIGN** in the ribbon.

2

Click New Design

Select a design type —

Social Post

,

Story

,

Banner

, or

Flyer

. Each type has preset dimensions for common platforms.

3

Customise your design

Edit the text, swap the background image, adjust colours to match your brand, and add your logo from the File Manager.

4

Save and export

Click **Save** to store the design in your library, or **Export** to download it as an image for sharing on social media.

Design Types

TYPE	BEST USED FOR	TYPICAL DIMENSIONS
Social Post	Facebook, Instagram feed posts	1080 × 1080 px
Story	Instagram & Facebook Stories	1080 × 1920 px
Banner	Website headers, Facebook cover	1200 × 628 px
Flyer	Promotions, events, announcements	A4 / Letter

How to Create a Letterhead

A professional letterhead gives your printed quotes, invoices, and formal letters a polished, branded look. Follow the steps below to design yours in the Design Studio.

BEFORE YOU START

Have your company logo image ready in the File Manager. Go to **File Manager** and upload the logo PNG/JPG first so it's available during design.

1 Open Design Studio

Click the **DESIGN** tab in the ribbon. If you don't see it, go to **Home → Tools → Feature Management** and enable **Social Campaigns**, then restart the app.

2 Create a New Flyer (A4)

Click **New Design** in the ribbon. Select **Flyer** as the design type — this uses A4 dimensions (595 × 842 pt) which is the standard for letterhead. Give your design the name **Company Letterhead** and click **Create**.

3 Add Your Company Logo

Click **Add Image** in the toolbar, then choose **File Manager** to pick your uploaded logo. Drag it to the top-left corner of the canvas. Resize by dragging the corner handles — aim for about 80–120 px height. Keep it proportional by holding **Shift** while resizing.

4 Add Your Business Name

Click **Add Text**. A text box appears — type your **business name**. In the text toolbar, set the font size to **22–26 pt**, weight to **Bold**, and colour to your brand's primary colour. Position it to the right of or below the logo.

5 Add Contact Details

Click **Add Text** again. Type your contact block on separate lines:

123 Business Street, City, Country
Phone: +1 555 000 0000
Email: hello@yourbusiness.com
Website: www.yourbusiness.com

Set font size to **9–10 pt**, colour to a mid-grey. Align it to match the business name block.

6 Draw a Dividing Line

Click **Add Shape → Line**. Draw a horizontal line spanning the full width of the page just below the header block. Set line thickness to **1–2 pt**. Use your brand colour or a neutral dark grey. This cleanly separates the header from the letter body.

7 Add a Footer (Optional)

Scroll to the bottom of the canvas. Add a thin line near the very bottom, then add a small text block below it with your **registration number**, **VAT/Tax ID**, or a tagline. Use 8 pt font, centred or left-aligned. This gives official letters a complete, professional finish.

8 Save to Your Library

Click **Save** in the toolbar. The letterhead is stored in your Designs library under the name you gave it. You can reopen and edit it any time — useful when your address or contact details change.

Click **Export**. Choose **PDF** for print-quality output you can attach to emails or send to a printer. Choose **PNG** if you need a high-resolution image to overlay on documents in another app. The file is saved to your Downloads folder.

DESIGN TIPS FOR A GREAT LETTERHEAD

- Keep the header height under 25% of the page — leave enough space for letter content.
- Use no more than 2 fonts: one for the company name, one for contact details.
- Stick to 2–3 brand colours maximum. Too many colours look unprofessional.
- Ensure the logo has a transparent or white background so it blends cleanly.
- Print a test copy before finalising — colours on screen often differ from print.

USING YOUR LETTERHEAD WITH INVOICES

Once exported as a PDF, your letterhead can be used as a background layer in any PDF editor. Alternatively, upload the exported PNG to the **File Manager** and use it as a background image in other Design Studio templates.

Letterhead Layout Reference

A standard business letterhead follows this structure from top to bottom:

ZONE	CONTENT	SUGGESTED HEIGHT
Logo area	Company logo, optionally business name beside it	80–120 px
Contact strip	Address, phone, email, website	40–60 px
Divider line	1–2 pt horizontal rule	4 px
Body area	Left blank for letter text (date, recipient, body)	~600 px
Footer line	Registration no., VAT, tagline	30–40 px

Restaurant Management

Set up tables and floor plans, build your menu, manage dine-in orders, run the Kitchen Display System, and control ingredients.

The screenshot displays the Zeebroo POS interface. The top navigation bar includes 'File', 'Home', 'Inventory', 'Finance', 'HR', 'Design', 'Restaurant', 'Restaurant POS', and 'View'. The 'Restaurant' tab is active, showing sub-navigation for 'Orders', 'Tables', 'Reservations', 'Menu Items', 'Categories', 'Ingredients', and 'Kitchen Display'. The 'Orders' sub-tab is selected, showing a list of orders with columns for Order ID, Status, Table, Amount, and Time. The orders are listed in a table format.

Order ID	Status	Table	Amount	Time
ORD-260702-038	Dine In	table1	LKR 600.00	PAID 13h ago
ORD-260702-037	Dine In	table1	LKR 900.00	PAID 13h ago

Zeebroo POS - 1003 products

Restaurant tab — order list with table numbers, order status, and amount. Use the sub-navigation to switch to Tables, Menu Items, Categories, Ingredients, or Kitchen Display.

REQUIREMENT

The **RESTAURANT** and **RESTAURANT POS** tabs only appear when the **RESTAURANT** feature is enabled. This feature cannot be combined with Point of Sale.

Setting Up Tables

Before taking orders you need to create your tables. Click the **RESTAURANT** tab, then **Tables** in the ribbon's Floor group.

1

Click New Table

Enter the table **Name** (e.g. "Table 1", "Window Booth") and its **Capacity** (number of seats). Click **Save**.

2

Arrange the floor plan

In the Floor Plan view, drag tables to match your physical layout. The visual map helps staff navigate quickly.

3

Table statuses

Tables show as

Available

(green),

Occupied

(amber), or

Reserved

(blue). Status updates automatically when orders are created or completed.

Building Your Menu

Menu management lives in the **Menu** ribbon group.

1

Create Menu Categories first

Click **Menu Categories** and create categories like Starters, Mains, Desserts, and Drinks. Drag to reorder them — this order appears in the Restaurant POS grid.

2

Add Menu Items

Click **Menu Items** → **New Item**. Enter the name, category, price, and optional image. Use the **Dietary**

tab to mark items as Vegetarian, Vegan, Gluten-Free, etc.

3

Link ingredients

Go to the

Ingredients

tab of each menu item and assign the ingredients used and the quantity per serving. This powers automatic stock deduction when dishes are ordered.

4

Toggle availability

Use the toggle on each menu item to mark it as available or unavailable. Unavailable items are hidden from the Restaurant POS grid in real time.

| Managing Orders

The **Orders** view shows all current and historical orders with their statuses. Filter by status — **Pending, Preparing, Ready, Served, or Paid**.

Click any order to open its detail panel, where you can update item statuses individually, add notes, or cancel the order.

STATUS	MEANING
Pending	Order placed, not yet started in the kitchen
Preparing	Kitchen has started cooking
Ready	Food is ready at the pass — waiting to be served
Served	All items delivered to the table
Paid	Bill settled — table marked available

| Kitchen Display System (KDS)

The KDS is a live ticket board designed to run on a screen in the kitchen. Open it by clicking **Kitchen Display** in the **KDS** ribbon group.

- Each order appears as a card with all its items listed
- Kitchen staff click items to mark them as **Preparing**, then **Ready**
- Cards disappear from the KDS once the order is paid
- When new items are added to a preparing order, they appear as a **new separate card** so kitchen staff can see exactly what's new

TIP

Run the KDS on a dedicated screen or tablet in the kitchen by opening a second window. The display polls for updates every 5 seconds.

| Ingredient Management

Track raw ingredient stock from **Restaurant → Ingredients**. Each ingredient has a unit of measurement (kg, L, pcs), a current stock level, and a low-stock threshold.

When a menu item is ordered, its ingredient quantities are deducted automatically if you've linked them in the menu item's Ingredients tab.

| Ingredient Purchase Orders

Order raw ingredients from your suppliers using the Purchase Order system under

Restaurant → Purchase Orders. The workflow mirrors the inventory PO system:

1. Create a Draft PO with supplier and line items (ingredients + quantities)
2. Place the order — status changes to **Ordered**
3. When goods arrive, receive them via a GRN — ingredient stock levels update immediately

Restaurant POS

Take dine-in table orders and takeaway orders, track kitchen status in real time, and process payment when all dishes are served.

Restaurant POS — menu grid on the left, active order cart on the right. Select items to add to the order, then process payment when done.

The Restaurant POS Interface

Click the **RESTAURANT POS** tab to open the order-taking screen. It has two modes, switchable from the ribbon:

- **Takeaway mode** — orders without a table. Enter the customer's name and phone number.
- **Table mode** — select a table from the floor plan to attach the order to that table.

The left side shows the **menu grid** (items grouped by category). The right side shows the **cart / current order**. Tabs across the top let you manage multiple active orders simultaneously.

Taking a Table Order

1

Select a table

Click **Tables** in the Restaurant POS ribbon. The floor plan opens — click an available table (shown in green). A new tab opens for that table.

2

Add items from the menu grid

Click menu item cards to add them to the order. Click a card multiple times to increase the quantity. All items are tracked with their kitchen status.

3

Send to kitchen

Click **Send Order**. The order is created in the system and immediately appears on the KDS in the kitchen. The table status changes to **Occupied**.

4

Track kitchen status

The cart shows each item's kitchen status —

Pending → Preparing → Ready → Served

. Statuses update in real time as kitchen staff mark items on the KDS. The live indicator in the top bar pulses to show the poll is active.

5

Add more items during service

If the order is still

Pending

, new items are added to the same kitchen ticket. If the kitchen has already started

Preparing

, new items create a *new separate kitchen card* automatically — so nothing gets missed.

6

Complete and process payment

The **Complete Order** button becomes active only when *all* ordered items have been marked as **Served**

on the KDS. Click it to open the payment screen.

7

Select payment method and confirm

Choose

Cash

,

Card

, or

Bank Transfer

. For cash, enter the tendered amount. Click **Confirm Payment**. A receipt is printed, the order is marked Paid, and the table returns to Available.

Taking a Takeaway Order

1

Click Takeaway in the ribbon

A new tab opens with the customer name/phone fields.

2

Enter customer details and add items

Fill in the customer's name and phone (optional but useful for pickup notifications). Add menu items from the grid.

3

Send to kitchen and complete

Same flow as a table order — send, track on KDS, complete when all items are served/ready for collection.

Multiple Active Orders

Each tab at the top of the Restaurant POS represents an active order (a table or a takeaway). You can have as many tabs open as you need. Switching between tabs never loses your data — each tab's cart, order ID, and kitchen statuses are tracked independently.

IMPORTANT

Once the kitchen has started preparing an order (status: Preparing), you cannot increase the quantity of existing items. Add new quantities as separate items — they'll appear on a new KDS card.

Feature Management

Enable or disable features at any time. Changes take effect immediately after the app reloads.

Opening Feature Management

Click the **HOME** tab → **Tools** group → **Feature Management**. A modal opens showing all available features with toggle switches.

Feature Management modal — toggle each feature on or off. Enabling Restaurant automatically disables Point of Sale, and vice versa.

Enabling and Disabling Features

1

Click a toggle to change its state

Blue (on) means the feature is enabled. Grey (off) means it's disabled. The toggle updates instantly in the modal.

2

Note mutual exclusivity

Enabling

Restaurant

automatically disables

Point of Sale

, and vice versa. You cannot run both simultaneously.

3

Click Save Changes

The app saves your preferences to the server and reloads. Ribbon tabs for disabled features disappear; tabs for newly enabled features appear.

NOTE

Your data is never deleted when you disable a feature. Re-enabling it restores full access to all previously entered records.

| Industry-Specific Defaults

When you choose **Restaurant** or **Bar** as your industry during registration, the Restaurant feature is automatically enabled and Point of Sale is disabled. You can change this at any time through Feature Management.

Settings & Preferences

Customise the app's behaviour, configure your receipt, adjust the display theme, and manage your subscription.

Opening POS Settings

From the **POS** ribbon tab → **Configure** group → click **POS Settings**. The settings panel has three tabs: **General**, **Accounts**, and **Receipt**.

General Settings

SETTING	WHAT IT CONTROLS
Display Theme	Light, Dark, or follow the OS setting. Dark mode reduces eye strain in dim environments.
Featured Products Limit	How many products appear in the POS grid before pagination kicks in.
Featured Categories Limit	Number of categories shown in the quick-filter bar at the top of the POS grid.
Discount Field	Show or hide the discount field in the checkout cart.
Checkout Modal	Show a confirmation modal before finalising a sale.
Show Service Products	Include service-bound products in the POS grid for service businesses.

Accounts Settings

Configure which bank account receives payments by default:

- **Default Deposit Account** — the account where all POS cash receipts are credited
- **Payment Settlement Mode** — *Immediate* settles each sale to the account right away; *End of Day* batches all sales and settles during the EOD process

Receipt Customisation

Control what appears on printed and digital receipts:

SETTING	EFFECT
Header Text	Custom text printed above the itemised list (e.g. "Thank you for shopping with us!")
Footer Text	Custom text printed at the bottom (e.g. exchange policy, website URL)
Show Business Name	Print the business name at the top of the receipt
Show Business Address	Print the address below the business name
Show Account Info	Print bank account details for customers who pay by transfer

| Toggling Dark Mode

You can also toggle dark mode quickly from the **VIEW** ribbon tab → **Appearance** group → **Dark Mode**. No restart required — the interface switches immediately.

| Checking for Updates

Click your profile name (top-right) → **Check for Updates**. The app contacts the Zeebroo server and compares the installed version against the latest release. If an update is available, a download link is shown for your platform (Windows, macOS, or Linux).

| Signing Out

Click your profile name (top-right) → **Sign Out**, or click **Sign Out** in the **VIEW** ribbon's Account group. Your local session clears and the login screen reappears. Your data on the server is never affected by signing out.

IMPORTANT

⚠ If you switch branches or businesses, any unsaved POS cart data will be lost. Ensure all active sales are completed or parked before switching.

REAL-TIME SYNC

Zeebroo POS automatically checks for changes to products, stock, tables, and menu items every 30 seconds. When another device or user updates data, your screen refreshes silently — no manual refresh needed.
